— PHILOSOPHY —

RETHINK DESIGN - PLAN GREEN

lasfera stands for attractive uniqueness. We combine European-influenced design, down to earth craftsmanship, high quality materials and advanced Technology. Who else would get the idea to combine green plants, light installations, different irrigation systems into a green mobile room divider?

CUBE planted

We have created CUBE planted to give end users, space planner and architects a greater flexibility: the aluminum CUBEs are available in custom sizes, equipped with a highly efficient light source, applied with wheels and therefore mobile and individually applicable - whether indoor or outdoor.

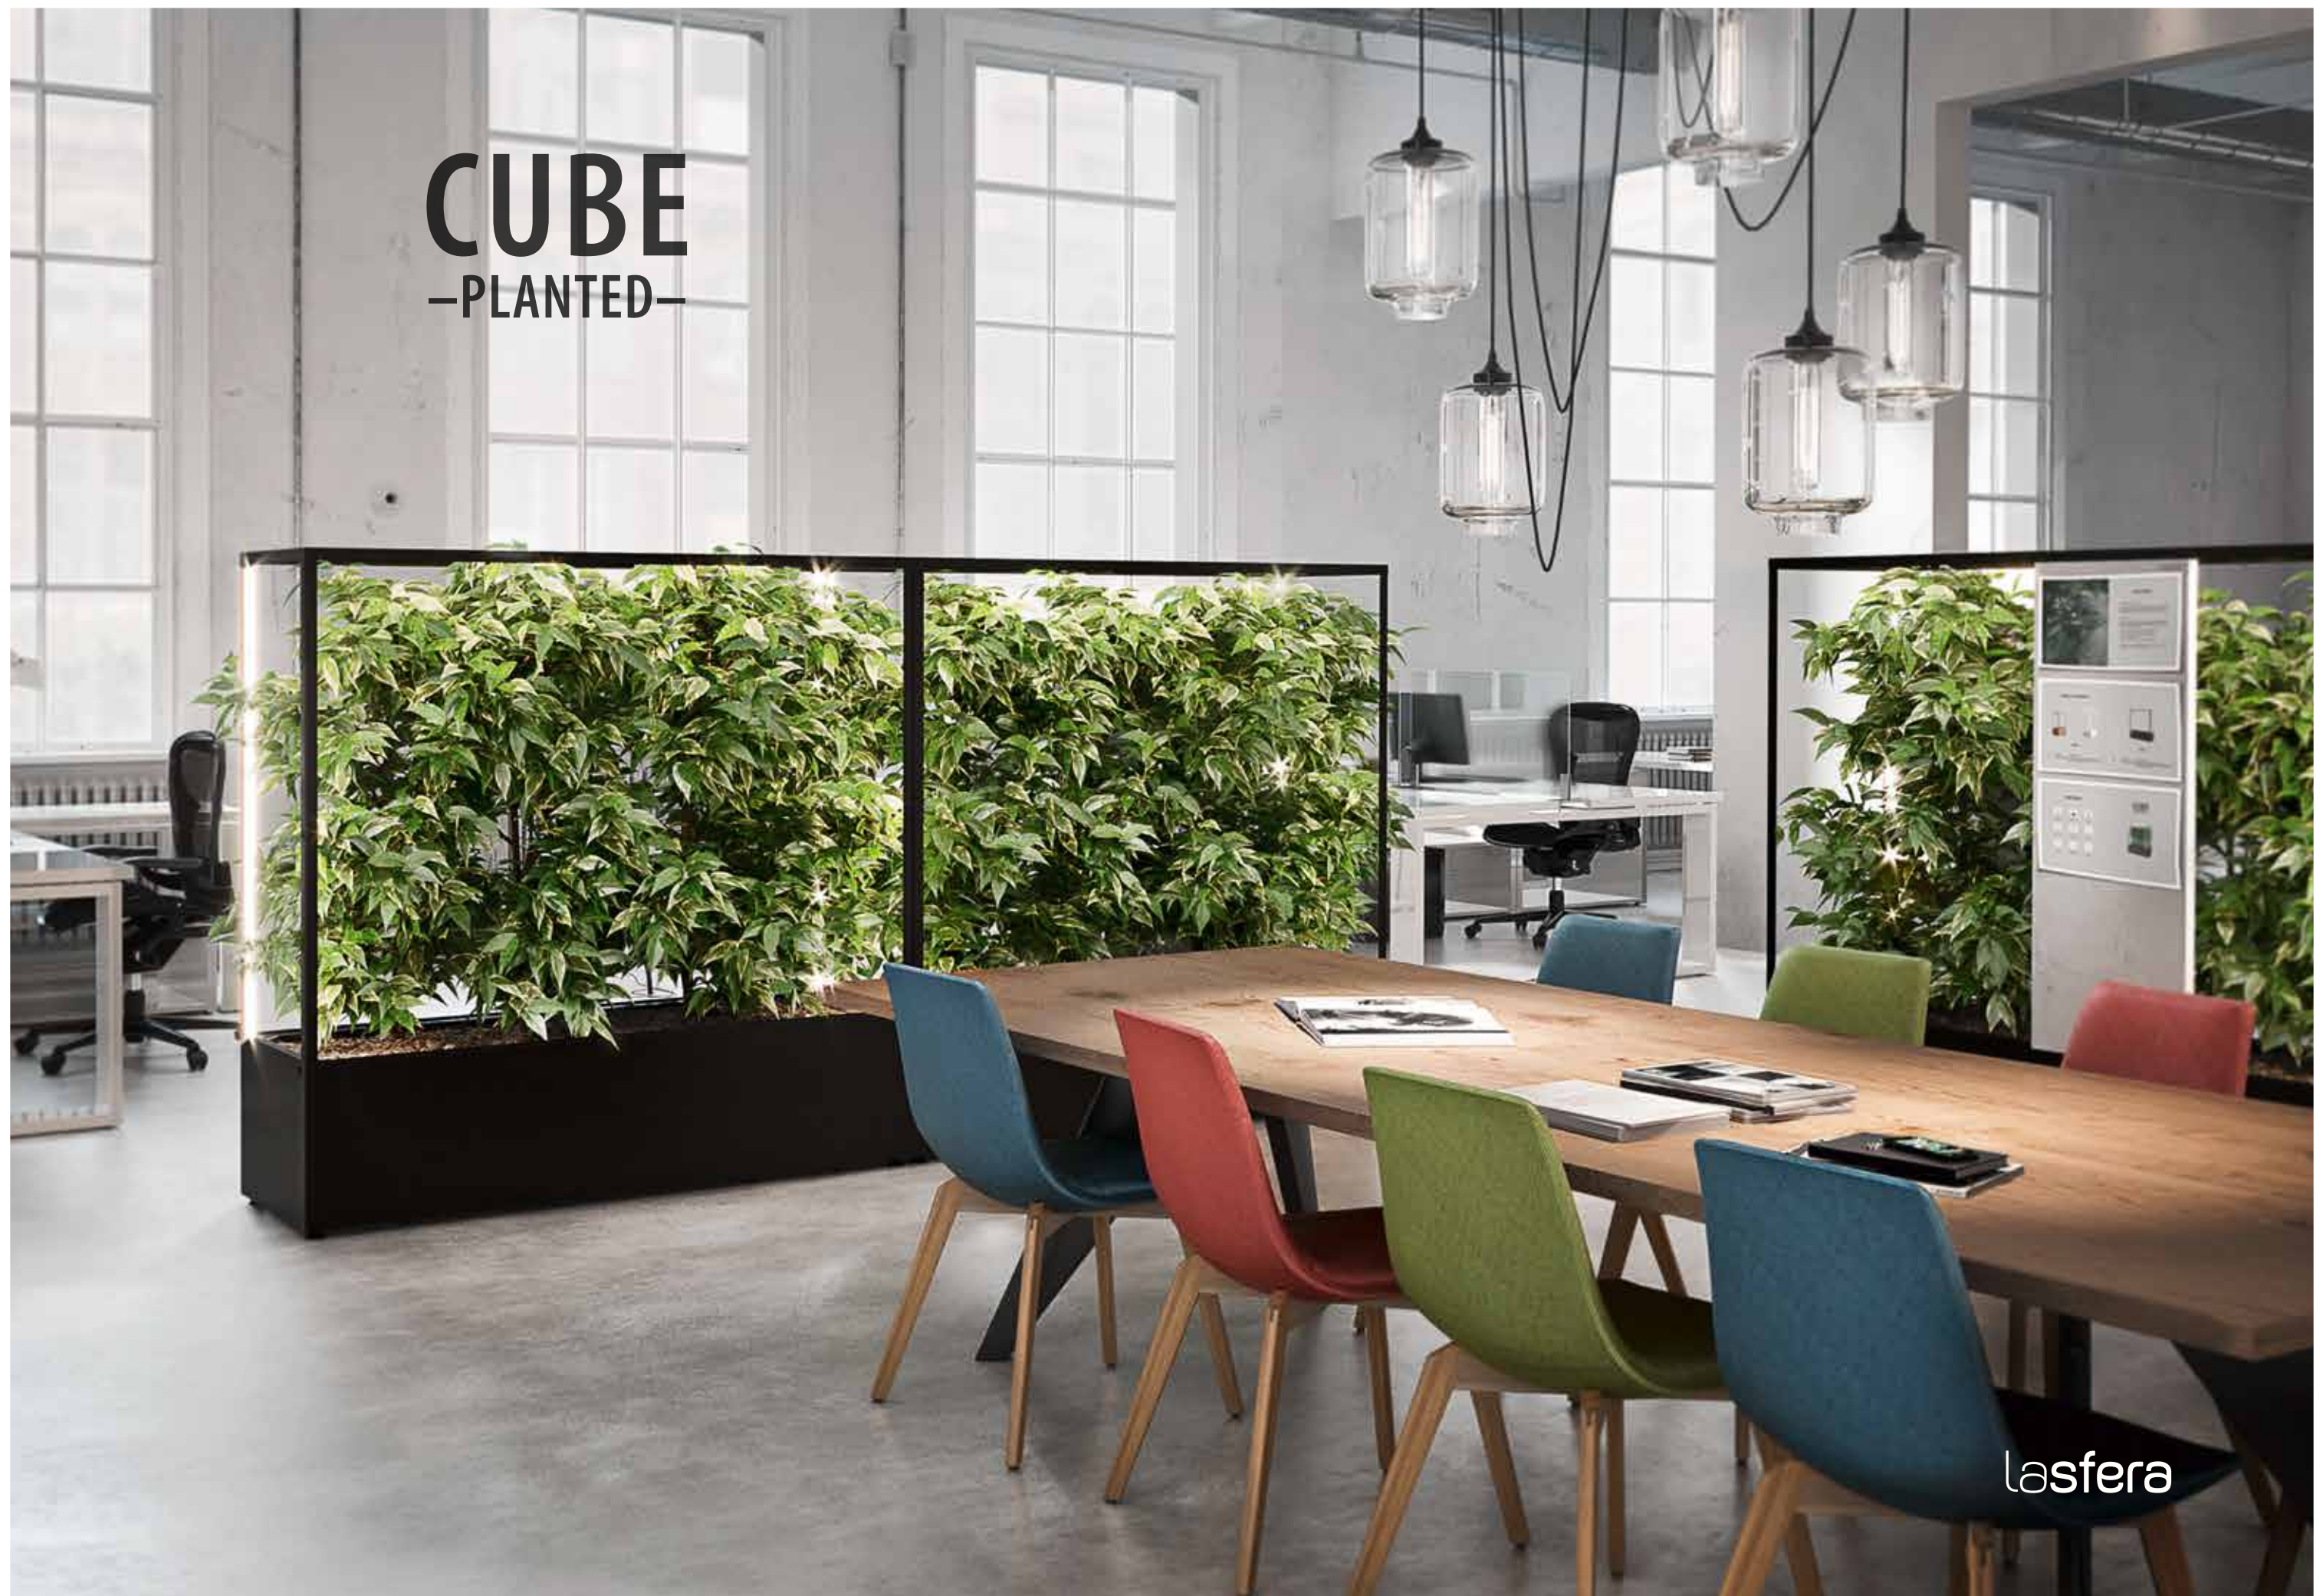

The CUBE planted collection:

- planted spaces and surfaces with a very special green- touch
- offers clear visual boundaries and more privacy
- enables unique and flexible space concepts
- ensures a healthier climate in offices and restaurants
- improves the room acoustics

CUBE planted - this is the unique combination of mobile room divider, green plant and atmospheric growth light.
